

For more than 25 years I have lived with a false tooth attached to a retainer. After much complaining about having to remove it to clean it, sometimes forgetting to put it in before leaving for work. Throwing it in the garbage accidentally etc. etc. I finally made the decision that I did not want to live with a retainer anymore .

I had 3 choices on how to remedy my dilemma

- 1) Implant which was complicated because I had to have an impacted tooth removed first or work around the impacted tooth. Very expensive and there was no guarantee that the implant would take.
- 2) Bridge, which meant that I would have to have 2 good teeth filed down to attach the bridge
- 3) Splinting,

I chose splinting because it was much cheaper than the first 2 choices. The most painless. Very little damage done to the 2 adjoining teeth.

Doctor Clemente was amazing, she was thorough, and a perfectionist.

She made the false tooth the exact colour of my own teeth. It is perfectly aligned with my own teeth.

I am so happy with the work Dr. Clemente did that I recommend this procedure whole heartedly.

I had to procedure done June 12th and I have had absolutely not problems.
